

EPMCDMETST-66637 - Enter edit mode for a task to change its title - Summary

Story Overview

As a user, I want to enter edit mode for a task, so that I can change its title. Frontend-only UI state change (no API call, no entity change). Estimate 3 SP, Priority High. Owner/Status: [pending] (Jira was unreachable during intake).

Architecture & Design

- TaskList lifts editingTaskId state so only one task is ever in edit mode at a time.
- TaskItem adds an Edit control, a conditional edit-mode input prefilled with the task's title, and focus/cursor placement on entry.
- No new dependency; stays on the declared stack (TypeScript/React).
- Design review verdict: APPROVED - 2 LOW notes carried into the implementation plan (stale editingTaskId on removal; sibling re-render cost), no architecture changes needed.

Code Changes

- frontend/src/components/TaskList.tsx - lifted edit-mode state
- frontend/src/components/TaskItem.tsx - Edit control, edit-mode input, focus/cursor placement
- .github/config/app-profile.yml - populated app descriptor
- docs/EPMCDMETST-66637/* - full documentation bundle
- tests/evidence/run-EPMCDMETST-66637-20261001T010000Z.log - verification evidence
- CHANGELOG.md - release entry

Review Outcome

1 HIGH (no automated test coverage - frontend has no test harness), 2 LOW (Mark Complete/Delete stay enabled during edit; Edit button stays clickable while already editing, harmless). Security, DRY, Code Clarity, Dependency Safety: no issues (npm audit: 0 vulnerabilities).

Verification Results

Code: 5/5 manual checks PASS (AC1, AC2, AC3, no-API-call, keyboard-accessible entry) - automated test generation was skipped with human consent. Docs: PASS, with one open note (Owner/Status [pending]).
